Dear Hiring Team,

I am a Master's student, set to graduate in December 2023 with a GPA of 4/4. Currently working as a Web Software Developer (Student Worker) at Arizona State University with around 2 years of experience, I am actively seeking opportunities in Software Development.

- With extensive experience developing applications using multitude of technologies, I've worked on diverse projects with hands-on exposure to various technologies such as:
 - AWS resources (EC2, S3, RDS, Autoscaling, networking), middleware architectures (REST APIs, system integration), and database projects using SQL.
 - I've also delved into Machine Learning, specifically focusing on recommendation systems with NLP.
 - I'm comfortable coding and developing applications using Python, JavaScript, jQuery, AJAX, SQL, CFML, C++, and AWS, covering both the backend scripting and frontend development.

Having a solid academic foundation and considerable experience developing software applications, I am interested and passionate in SDE roles and backend development.

Thank you for your time.

Sincerely,

Spurthy Mutturaj
